Quick Start

1 Requirements

Recommended environment:
node js 16.x.
npm 7+

2 Copy .env.example to .env and update the variables.

3 Install & Start

Install dependencies:

npm i

Start the Postgres Database in Docker:

npm run docker

Note: The npm script will complete while Docker sets up the container in the background. Ensure that Docker has finished and your container is running before proceeding.

Initial setup:

npm run setup

Run the first build:

npm run build

Start dev server:

npm run dev

3. For deployment, see the readme file
